COURSE DESCRIPTION

This course surveys international macroeconomics, with special reference to international monetary policy and international financial market architecture. Topics include the structure of international financial markets; the role of central banks; exchange-rate systems; the determination of balance of payments and exchange rates; macroeconomics of open economies; policy analysis for open economies; policy coordination; the International Monetary Fund; and financial crises.

The aim of this course is to provide an analytical background for those who plan to go into government service, international organizations and agencies, businesses involved in the global economy, nongovernmental organizations with international foci, and consulting firms analyzing international policy issues.

Only those who are comfortable with algebraic and graphical analysis should enroll in this course. It requires sustained immersion in relevant economic theory, and does not present a primarily descriptive or historical approach.
